Mobile Surveillance Platform

OUT OF SITE-OUT OF MIND- ALWAYS THERE

PDS Mobile Surveillance Platform (or MSP) is a complete mobile surveillance system used to secure temporary or remote locations. It can be deployed quickly with multiple cameras for day and night surveillance, a robust NVR with local and remote management capabilities, and cellular, satellite, of other transmission systems providing remote monitoring, live and playback viewing capabilities. Housed on an easily-moved platform for rapid deployment virtually anywhere. PDS Mobile Surveillance Platform is designed for a variety of applications,

With this powerful tool PDS can provide intelligent monitoring of virtually any location no matter how remote. Water filtration or pumping facilities, remote SCADA networks, military perimeters and city centers can all be vigilantly protected with our state of the art monitoring system even in areas with no existing communications infrastructure.
